ECE/CPSC 3520
Software Design Exercise #1
SSII 2019

GRADING

1. Legal code (penalty varies by severity and number of occurrences)

   - `let` should be used only for function definition. `let` cannot be used in a function body. Loops and local or global variables are prohibited. (-5 each)

   - **The only module you may use is the List module**. This means you may not use the Array Module. Also excludes Printf module. (-5 each)

   - **The use of sequence (6.7.2 in the ocaml manual) is not allowed**. Do not design functions using sequential expressions or begin/end constructs. (-5 each use)

2. Archive as specified (readme, file descriptions, pledge, zipped) (5)

3. ASCII log file showing 2 sample uses of each of the functions required (`nnr1.log`). (15)

4. Function tests (Recall the grade is based upon a correctly working solution;`ocaml` should not generate any errors or warnings.) SEE AC-COMPANYING LOG OF TESTING SCRIPT. (80 total; 4 pts each)
